

## How to connect MS610UB to the existing inverter wire harness

This LED upgrade kit comes with a small, compact LED driver MS610UB (replace old inverter), it could be mount anywhere on of LCD screen or on the chassis. To fire up LED backlight, all you need to do it connecting positive (+12 ~ 24V DC) to Red wires and Negative (Ground) to Black wires. This DC supply voltage can be found on your existing inverter wire harness. Easy to install! Anyone can do it!

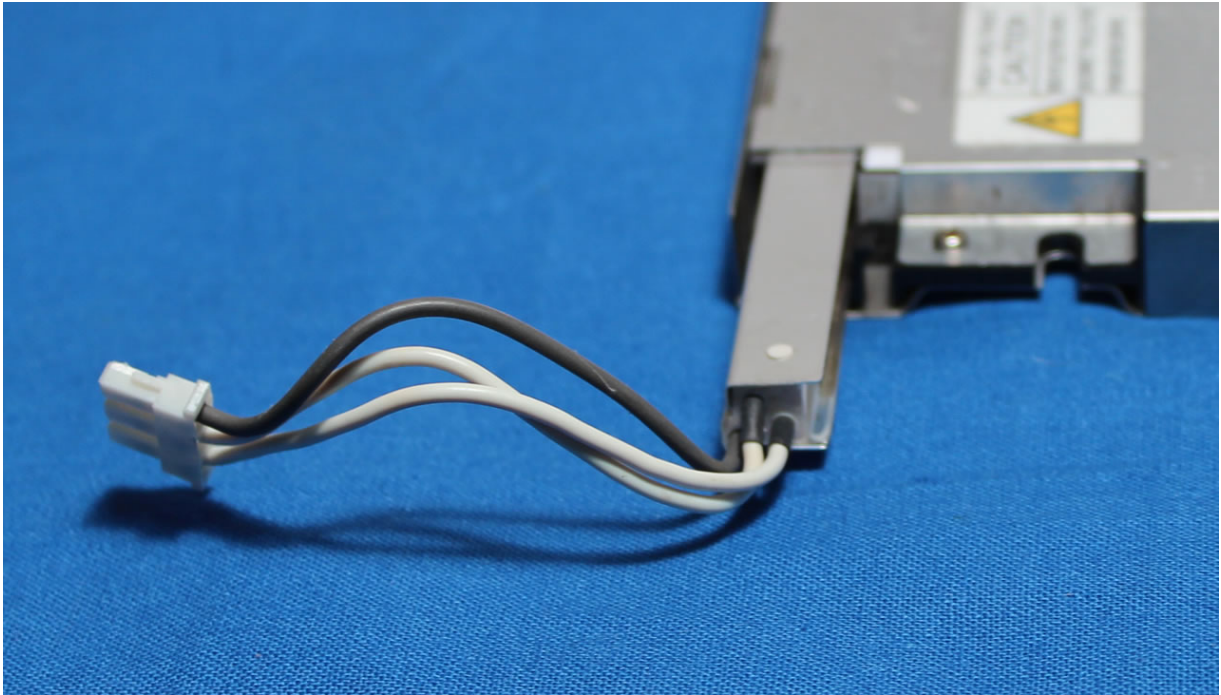

## How to Install

Slowly pull out original reflector, then peel off protective film on L shaped Reflector. Then slowly push L shaped Reflector in as show on last photo.
